TeknoXML Web Services

Imagine a scenario where you need to integrate with multiple travel suppliers for your portal. This would mean going through different API documentations, learning their command and response structures, error codes, etc. and you can imagine how tedious this could be. TeknoXML is the right solution for such companies. We provide XML Web Services for the following suppliers at the moment.

The advantage here is that you can come with your supplier API credentials, connect to our Tekno XML Web Services and start working. If you have the APIs of the 7 flight suppliers then it is ready to work with all the 7 from day one. No need to think on how you will integrate all these into one platform, etc. For a developer life is made simple as he has to learn only the Tekno XML command. For eg: Flight availability in Tekno XML will bring in the availability from all the 7 flight suppliers. There is no restriction on your development platform. You can be working on Windows, Linux or Unix and your portal could be in Java, PHP or in .NET and still TeknoXML will work for you.

GDS & Non-GDS /XML-API Travel Gateway

Travel portals and Online booking tools needs to pull data from multiple data sources. These may be GDS data as well as Non-GDS data and some may be using Web Services and others maybe on API or XML model. There is no "one size fits all" approach in this case and a lot of effort goes into customizing the application for accommodating a new content provider. This makes the application not stable and scalability is always a headache.

Our team of designers came up with a unique GDS & Non-GDS / XML-API Travel Gateway that will allow the integration of data from GDS like Galileo, Amadeus, Sabre, World Span, etc. and also Non-GDS carriers like Ryan Air, JetBlue, BMI, etc. Non-flight components like Hotels, Cars, Transfers, Sightseeing, Hostels and Insurance, etc. can also be integrated using this.

The Gateway acts like a switch in such a way that you can literally turn ON/OFF each of these independent data suppliers as you wish. The other unique feature is that results from multiple GDS can be shown on one single screen itself.

The provision for accommodating travel agencies with the Single Agency – Multi Branch as well as the Multiple Agency – Multi Branch is another striking facility of this Gateway.

Our Technical Skill Set

Methodologies, Patterns & Practices

Object Oriented Analysis and Design (UML), Agile, SaaS, Test Driven Development, Enterprise Library, Design Patterns and Unit Testing using NUnit and Junit

Testing Services

Test Plan and Strategies, Test Progress Monitoring, Test Automation, Test Execution and Defect Tracking, Configuration Management, Product Assurance

Technologies

.Net, C#, AJAX, MVC, Silverlight, LINQ, Java, J2EE, JMS, JSF, EJB, Struts, WML, VBScript, Java Script, JQuery, CSS, PHP

Other Tools

Visio, NDoc, FxCop, Visual source safe, Tortoise SVN, Ants Profiler (NAnts), Obfuscation (.Net Community Edition), MS Project

Web Services

Reusable Service Components, SOA, SOAP, UDDI, WSE, XML, XSL, XSLT

Controls

Telerik Controls, Component Art Controls, Dundas Controls, Dev Express, DotNetNuke, MS Charts

Reporting Services

Crystal Reports, SQL Reporting Services

Mobile Applications

Windows CE, Windows Mobile, Pocket PC

Database Management

Microsoft SQL Server, Oracle, MySQL, MS Access

Security Standards

Claims based security, PCI security standards
